

SEARIGHT'S Compound Lever SNIPS

reduce snip labor to the minimum and increase the volume of work because they cut easy! They cut to the point! If you doubt it

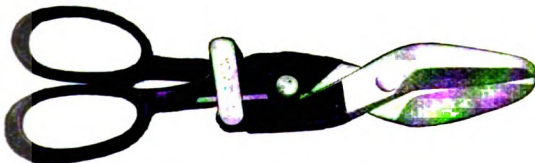

"Ask the man who uses one."

They are strong, durable, made of the best material, and absolutely guaranteed. For small but heavy work our small sizes are marvels of power and smooth cutting, and have the cutting power of the largest common snip. They will cut 20 gauge at the point with ease. They are no experiment, but are being used in the largest houses and factories in the land. Those who use them say, "If I could not get another, I would not part with my pair for \$20."

The above is easy to prove. **"Ask the man!"**

Made in five sizes, 7, 8, 10, 12 and 14 inch lengths of standard cut.
